

Commands to create the required directory structure.

Windows:

```
mkdir C:\javaindepth\src\com\semanticsquare\basics
```

```
cd C:\javaindepth\src\com\semanticsquare\basics
```

Mac or Linux:

```
mkdir -p javaindepth/src/com/semanticsquare/basics
```

```
cd javaindepth/src/com/semanticsquare/basics
```

On Mac or Linux, if the above mkdir command is not allowing you to create the directory structure, then it is likely you do not have the permission and you can try using sudo command as follows. You may be prompted to enter password.

```
sudo mkdir -p javaindepth/src/com/semanticsquare/basics
```
